

Pesticide Risk Reduction Programme – Ethiopia (PRRP)

Development of scientific evaluation system for dossier evaluation (bio-pesticides)

Goal of Work Package B.2.2
Development of bio-pesticides registration system in Ethiopia.

Approach
A bio-pesticide registration system will be established by developing a science-based evaluation system and technical capacity of the concerned bodies who are involved in the registration process will be strengthened.
The project "Bio-pesticide Registration System Development Project" will be funded by (SAICM) and will be executed and implemented by the Animal and Plant Health Regulation Directorate (APHRD).

APHRD, EPA,
EARI,
Universities,
QSA

Results sofar
The project has been approved by SAICM for funding. However, the project agreement is not yet signed.

Activities

- Development of data requirement for the registration of bio-pesticides
- Capacity building for bio-pesticide dossier evaluation.
- Capacity building on efficacy testing of bio-pesticides
- Development of regulation for the registration of bio-pesticides.
- Development of procedures for the introduction of microbial pest control agents.

Expected impact
A transparent and more science based bio-pesticides evaluation system is established. Alternative to chemical pesticides can be evaluated, authorized and used in Ethiopia. As a result risk caused by pesticides use is reduced.

Towards a sustainable use of pesticides in Africa
